PCD/CBN TECHNOLOGY

ACCURATE AND QUICK

Radial and axial setting of
guide pad tools with only one device

EV-800 vertical pre-setter

GÜHRING - YOUR WORLD-WIDE PARTNER

EV800

Vertical pre-setter for tools with guide pads

RADIAL cutting edge setting

Through relative measurement EV-800 enables the μm -accurate setting of the cutting edges via the guide pad diameter. A second dial gauge permits the individual adaption of the cutting edge taper. The measuring probes are flexible and can be adjusted for any cutting edge length.

AXIAL cutting edge setting

The axial cutting edge protrusion can be accurately adjusted with an optical relative measurement (full HD camera & cross hairs). The guide pads of the tool serve as a reference. Via them the cutting edge advance is adjusted via the guide pad chamfer.

- Full HD camera (12V) with blend-in cross hairs
- 9" full HD display (12V)
- LED illumination

- Radial and axial setting with one device
- Accurate and process reliable setting
- Up to 800 mm tool length and 130 mm tool diameter

MK2 tailstock in sprung sleeve for stabilising and correcting of run-out errors.

Full HD camera (12V) with blend-in cross hairs for the axial setting of the cutting edges.

Thanks to variable image magnification and flexible positioning the tool and the cutting edges can be visually checked with the camera.

dial gauge for adjusting the radial cutting edge protrusion over the guide pads.

second dial gauge for adjusting the cutting edge taper.

Depending on the requirement, tools can be adjusted in HSK holders or between centres. Accurate concentricity of the spindle is guaranteed thanks to radial and axial alignment of the various HSK adapters with a mandrel.

- Measurement between points with solid carbide point in HSK holder
- Suitable for holders in HSK sizes 32, 40, 63, 80 and 100
